## DETAILED ACTION

### *Drawings*

1. The drawings are objected to for the reasons listed in the attached Form PTO 948. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 4-14, 16-25 rejected under 35 U.S.C. 102(b) as being clearly anticipated by Smith (1,428,992).

4. Smith discloses a can seaming machine including each of the limitations recited in these claims. Specifically, Smith discloses, inter alia, a fixture (5), a pressing structure (see Fig. 1), a jig (3) with serrations (7). Furthermore, Smith discloses that the purpose of the serrations (which read on the limitations of claims 2, 5-10, 14, and 17-22) is so that “the can is effectually prevented from rotating under the action of the seam forming crimping rollers” (page 1, lines 98-100).

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 3 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith in view of Momotome et al. (JP 01249234 A – hereinafter Momotome).

7. These claims add a generally annular side wall. Momotome discloses, in the art of container seaming, the use of a generally annular side wall (27), which stabilizes the container and prevents unwanted deformation. Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention to provide Smith's can seaming apparatus with jig side walls in order to further secure the container in order to prevent unwanted deformation, as suggested by Momotome.
